DPF RECOVERY OPTIONS REFERENCE GUIDE

QUALITY	METHOD OF RECOVERY	WHAT THIS IS	PROS	CONS	EXPECTED USEFUL LIFE/DUTY CYCLE	PRICE RANGE	PERFORMANCE WARRANTY
STAGE 1 BASIC	Pneumatic Blow & Test Only	This is the quickest possible cleaning you can purchase. It can be performed in 30 to 60 minutes and it may be all you need to get your equipment operational for extended service.	Very fast in-service turnaround times	This is only a quick fix. Your equipment is still operating in a compromised condition and will require maintenance in the very near future.	A few days to a couple of months depending on industry and application.	\$79.95 (at DPF Alternatives) to \$300.00	None
STAGE 2 STANDARD	Pneumatic Blow & Bake	This is a controlled off the vehicle/equipment regen that uses a kiln to combust carbon (soot) into ash. Once cooled, as much ash as possible is blown out using pressurized air.	This service is readily available in most markets, and offers a temporary "quick fix" to those who need to buy some time until they can properly correct the issues. This service should not cost more than \$99.95.	This process can ruin a filter over time. You can only use this process 1 to 4 times before the filter will no longer flow within specifications. Fuel economy and power are never fully restored, and both will continue to decline after each attempted cleaning.	Duty cycle declines with each cleaning by approximately 30%	\$99.95 (at DPF Alternatives) to \$600.00 (most common price is \$325.00)	None
STANDARD	Remanufactured (Remans) Filter Replacements	This is a used filter that can from someone else's vehicle that has been blown and baked in 95% of the cases. There are a few companies that will also use an aqueous flush (water based solution) to enhance the cleaning results.	Typically a fast solution to a clogged DPF issue since some shops will have them on-the-shelf in their inventory. And, they are about the third the cost of an Original Equipment (OE) replacement.	This is still just a blow & bake filter with all the same limitations as above, it just happens to come in a new box. You also do not know what the filter environment and care was prior to you purchasing it. Cost. They are very expensive for what you get.	Maximum duty cycle of 66% of new/fully restored filter, may be even less depending on the number of times the filter was remanened.	Starts at \$700 and goes up in excess of \$10,000 depending on year, make, and model	None, workmanship and materials only.
STAGE 3 ADVANCED	Aqueous Flush - Solution Based Cleaning	There are a few companies (some OE manufacturers) that have added a solution based flush to their cleaning process. This process helps recover more of the filter's useful life and performance than what a blow & bake or remanend have to offer.	Better cleaning offers longer duty cycles and better overall performance and can be done in the same amount of time as a traditional blow & bake cleaning.	Although the aqueous flush will remove more residual soot and ash than a conventional blow & bake, it still cannot safely remove the build up plaque (concrete) that forms when exhaust moisture combines with incoming soot and ash and then becomes baked onto the substrate walls. The plaque left behind impacts the DPF's performance, shortens its life, and decreases the chances of recovery in the future.	This process creates a cleaner filter, and as a result you will receive greater filter life, a longer duty cycle, and better initial fuel economy and power. The additional life expectancy is estimated as twice that of a traditional blow & bake cleaning.	\$250 to \$300 (at DPF Alternatives) Up to \$600.00 elsewhere	DPF Alternatives offers a six (6) month No Hassle performance warranty (no other company offers a "performance" warranty at this time.
ADVANCED	Aftermarket Replacement Filter	This is a new filter manufactured by a company other than the company who manufactured the Original Equipment (OE) filter that was installed in the vehicle by the manufacturer.	It is a new filter. You should receive the same performance as a new OE filter for less money.	Cost over a full ultrasonic restoration, lead times to have one shipped, shipping costs.	There is no data that suggests an aftermarket filter will perform any differently than an OE filter at this time.	\$1,100 to \$22,500 with most common filters falling between \$2,500 and \$5,500	DPF Alternatives offer a One Year - No Hassle performance warranty on all aftermarket filters sold, other companies only offer workmanship and materials only.
STAGE 4 ELITE	DPF Alternatives Ultrasonic Restoration	DPF Alternatives combines ALL of the "cleaning" methods listed above with its proprietary Ultrasonic restoration process to remove 99.6% of all DPF contaminants. This allows you to retain your OE filter indefinitely when maintained properly.	You receive ALL of the benefits of a brand new Original Equipment (OE) filter at a fraction of the cost.	As with all methods, fuel and oil soaked filters should not be put through this process unless the location is specifically equipped to address these issues.	Exactly the same as a brand new Original Equipment (OE) filter, with all the exact same fuel economy and power/performance.	\$400 to \$500 (only at DPF Alternatives)	DPF Alternatives offer a One Year - No Hassle performance warranty on all Ultrasonic restorations Nationwide
	Original Equipment (OE) Replacement	This is a new filter from a dealership that represents the vehicle manufacturer. This is the same filter that was installed when your equipment/vehicle was manufactured.	OE is recognized as the optimal part.	This is the most expensive option available, and the cost and availability (shipping time as it relates to down time) are many times prohibitive for most customers.	Same as the original installed.	\$1,500 to \$28,000	None
STAGE 5 ULTIMATE	DPF Alternatives Ultrasonic Restoration with Max Mileage	DPF Alternatives combines ALL of the "cleaning" methods listed above with its proprietary Ultrasonic restoration process to remove 99.6% of all DPF contaminants. This allows you to retain your OE filter indefinitely when maintained properly, AND, when you join the DPF Alternatives/Max Mileage Loyalty Program you can receive a LIFETIME Warranty on your Diesel Particulate Filter!	You receive ALL of the benefits of a brand new Original Equipment (OE) filter at a fraction of the cost, and you will NEVER have to worry about your DPF for as long as you own your vehicle!	As with all methods, fuel and oil soaked filters should not be put through this process unless the location is specifically equipped to address these issues.	Better than a brand new Original Equipment (OE) filter! By combining the DPF Alternatives Ultrasonic restoration with the Max Mileage Fuel Borne Catalyst you will keep your DPF flowing like new for the life of the filter. By purchasing and using Max Mileage (available at all DPF Alternatives locations in North America) you are ensuring you will benefit from the same fuel economy and power/performance as a new OE filter ALL THE TIME, for as long as you own that vehicle.	\$450 + \$250 for your first gallon of Max Mileage (only at DPF Alternatives)	DPF Alternatives offers the world's only LIFETIME WARRANTY - the No Hassle performance warranty you can depend on nationwide - You NEVER have to worry about your DPF again.
